1. Introduction

International trade is the exchange of goods and services between nations. It enables a nation to specialize in those goods it can produce most cheaply and efficiently. Moreover, trade enlarges the potential market for the goods of a particular economy. The increased international demand for goods translates in to greater production and more extensive use of raw materials and labour, which in turn leads to growth in domestic employment. Competition from international trade can also force domestic firms to become more efficient through modernization and innovation. Since the beginning of international trade, nations have striven to achieve and maintain favourable balance of trade i.e. export more than the import. Trade has always been the major force behind the economic relation among nations. The original information is obtained from the Ethiopian Customs Commission.

In view of this vital role international trade plays in the economic development of a country, and the overall responsibility of the Ethiopian statistical service (ESS) to provide a continuous statistical reference in all fields of statistics. ESS found it imperative to resume the publication of data pertaining to Ethiopia's international trade. With this in mind it will be a timely thought to take sight of Ethiopia's international trade for the past three months, Third quarter 2024 (July - August) this file. The table conveys volume and value of trade that goes out and comes to the country, visible balance of trade, the major commodities of export and imports and the direction of trade this file however is intended as a bird's eye view to the rapidly increasing foreign trade of the country, not as a detailed report.

2. Concepts and Definitions

Imports: - Are goods entered at the time of importation for consumption or warehousing into Ethiopia. including goods which are subsequently re-exported or re-directed.

Re-Exports: - Are imported goods subsequently re-exported without change of form, including ships or aircraft's stores.

Exports: - Are Ethiopian products, including imports which are exported after being transformed, improved or repaired.

Trade Balance: The total Exports plus Re- Exports minus total Imports.

Country of Origin: - The importers are obliged to submit manufacturer's invoices with import declarations. Generally, the country of origin is then the country in which goods were grown or produced.

Country of Destination: - Is the country of final destination to the extent identifiable from records.
